ARTWORK GUIDELINES

ARTWORK REQUIREMENTS

To ensure that your artwork will open on our systems without any issues, please save your documents in the formats listed below.

RECOMMENDED SOFTWARE WE USE

- * Corel Draw *.cdr, *.png, *.eps, *.pdf - vector)
- * Adobe Illustrator(*.ai, *.eps, *.pdf - vector)

SAVING GUIDE (USE ONLY AS A SAMPLE GUIDE)

If your artwork is an illustration (meaning vector based) please save this type of file as an Adobe Illustrator or Corel Draw EPS file, with ALL FONTS/TEXT CONVERTED TO PATHS.
Acceptable formats are (.cdr,.ai, .eps and .pdf)

If your artwork consists of photos, and scanned images (meaning Raster images), can be saved using file formats (*.tif, *.png). Please save all artwork @ 300 dpi and to actual required PRINT SIZE ready for printing. A transparent background is highly recommended and required for all files.

- Please save any Corel Draw files or Illustrator in EPS format.
- A combination of Raster and Vector images can also be saved in EPS file format.
- Make sure all artwork is sized up to the actual required print size ready for printing.
- Make sure all Placed logos on artwork are included as separate 300 dpi TIFF files in addition to the original artwork.
- Include a colour printout & include any PMS No's (Pantone Matching System) of all artwork
- No Microsoft Word, Powerpoint or Excel Documents.

To save time on file preparation, it is recommended that you supply the original artwork file in it's native design software file format, retaining any layers and transparencies.

What is DTF?

As the name suggests, a **direct-to-film** printer allows you to print a design on a film and transfer it directly to the intended surface, such as fabric. The key reason why the printer DTF is gaining prominence is the freedom it gives you to choose almost any surface for printing.

The DTF process is as simple in its working as its name suggests – Print on a film and directly transfer it onto fabric. The most prominent factor that makes this process worthy of use across a larger number of people is the freedom to choose almost any fabric. DTF printing definitely has some benefits that make it the perfect addition for your garment printing business.

Direct to film printing involves printing a design onto a special film, applying and melting a powder adhesive to the printed film, and pressing the design onto the garment or merchandise.

While direct to garment printing works best on 100% cotton, DTF works on many different garment materials: cotton, nylon, treated leather, polyester, 50/50 blends, and both light and dark fabrics.

You can expand your inventory by applying your designs to a whole variety of merchandise with DTF.

Costing Embroidery

While there are advantages to having a printed price list for embroidery quotes, there are still the variables that will alter these prices.

Globally, embroidery pricing is calculated on a 'per stitch' basis and this figure is not known until the Embroidery Master is supplied.

We have included for your costing purposes indicative pricing based on the number of stitches.

But how do you know the number of stitches, here's a rough guide:

Small Logo: to 5000 Stitches. Medium Logo: 5000 to 10,000 Stitches. Large Logo: 11,000 to 20,000 Stitches.

You've seen a lot of sew outs - possibly a *gazillion* stitches but did you know there are only 3 types of stitches out there?!

Up your Product Knowledge at your next sales meeting when you casually name drop stitch types and mention how to use them.

3 Major Stitch Types -Satin Stitch | Fill Stitch |Walking Stitch

The Satin stitch is flexible and dynamic. The satin stitch has strong fundamentals and gains style points for it's decorative applications and it's the most called upon stitch in your roster & you often see satin stitches outlining letters and customising designs with text. Satin stitches also work well for filling in small areas & highlighting details in larger designs and there's almost nothing a satin stitch can't do.

Satin stitches lie flush and neat against the fabric, the glossy, flat texture produced by this stitch resembles satin fabric.

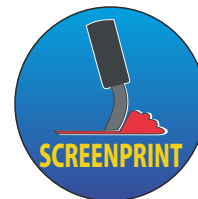

Fill stitch, the fill stitch lays a foundation for simple or complex design strategies. You don't need to know much about art for embroidery to order high performing embroidered apparel.

Embroidery-Walking-Stitch The walking stitch delivers big, time and time again. Primarily used for detail work as part of a larger design, the walking offers a lot of creative possibilities.

Screen Printing

If you have a customer come to you and ask for "silk screened" shirts, don't worry, the term means the same as screen printing. The three terms "serigraphy," "silk screening" and "screen printing" are all interchangeable but the term "silk screening" is still commonly used.

Is screen printing more expensive? - The benefits of screen printing are the more you order, the cheaper the cost per unit – although the initial setup fee can be expensive, the more copies you need, the cheaper it works out.

Once your artwork has been setup, you don't need to pay the fee again which is ideal if your design rarely changes.

Artwork preparation is also often factored into the screen cost. You need Film and Screen for each colour.

We need to print to film, expose each screen, produce/print, reclaim and coat for next production.

Not only is there time associated with burning the screens, there is also a lot of material cost that goes into re-creating a film / screen.

What is cheaper digital or screen printing?

Digital for multi colours, lower per-copy costs. High detail designs are best off using a digital printing method.

If you have a small-scale printing job, digital printing is more economical as set-up costs are less but re-prints still have a Set Up.

How is the design being created?

How many items are in the order, and are they all the same or is it a combination of different kinds of products?

VINYL DIGITAL PRINTING

Digital Vinyl Xfers

If you have a customer come to you and ask for "vinyl" Logos, then the answer is Yes.

These are printed in Full Colour on adhesive Vinyl and Laser Cut with a Keyline.

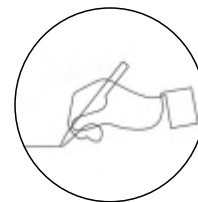

This Keyline is colour matched as close as possible to the background of the garment, bag or cap.

Ideal for Pocket Logos, Club Logos, smaller quantities of for events.

These are costed on the Square Centimetre of the Image to be printed.

Vector Re-Drawing

In vector graphics, a graphic artist's work, or file, is created and saved as a sequence of vector statements.

A vector graphic file describes a series of points to be connected & images created with tools such as

Adobe Illustrator and Corel's CorelDRAW are usually vector image files.

Simplified, vector graphics are like connect-the-dots drawings.

Vector Vs. Raster

A raster graphics image maps bits directly to a display space, also called a bitmap.

Raster graphics are made up of a fixed number of pixels, which makes them less scalable than vector graphics.

At a certain point, when the raster image is enlarged enough, the edges become ragged, and it appears pixelated -i.e., when the pixels become visible so Raster graphics cannot be scaled up without sacrificing image quality

What are vector graphics used for?

Graphic artists, illustrators and designers use vector graphics for a variety of reasons, including the following:

Scalability

Vector formats are good for projects that require scalable graphics, including scalable type and text.

For example, company and brand logos are displayed at different sizes as a logo created with vector graphics can be scaled up or down without loss of quality or creating a large file.

It was the scalability feature of vector graphics that resulted in its return, after falling out of favour to raster graphics in the '80s.

Vector graphics were originally used in computer displays in the '60s & '70s.

The World Wide Web Consortium worked on Vector Markup Language, which evolved into the Scalable Vector Graphics open source language that contains vector and raster elements.

App and web development.

Vector graphics are useful in application and web development because web apps and the graphics they contain must work with various screen sizes and device types.

Animation.

Animated images are also usually created as vector files, which provide for cleaner and smoother images.

Computer-aided design (CAD).

CAD programs frequently use vector files for manufacturing, engineering and design because of their scalability and ease when it comes to editing the mathematical formulas.
